

Global Electronics Retailer Sales Performance Analysis
Nexquantum Academy × PAC Foundation
Group 2 Capstone Project

Introduction

This project analyses the sales performance of a global electronics retailer. The aim is to understand how the business is performing by looking at sales, products, customers, stores, and different currencies. The insights from this analysis can help management make better business decisions.

Project Objectives

- Analyse the company's sales performance.
- Identify the most profitable products and brands.
- Evaluate customer and geographical performance.
- Discover sales trends over time.
- Provide recommendations to improve business performance.

Data Overview & Data Preparation

Dataset Used

The analysis was carried out using five datasets:

- Sales
- Customers
- Products
- Stores
- Exchange Rates

Data Preparation Process

We used **four different tools** during the project:

- **Microsoft Excel** – Initial data review and basic cleaning.
- **Python** – Data exploration, validation, and revenue calculations.
- **SQL Server** – Data cleaning, joining tables, and querying the dataset.
- **Power BI** – Data modelling, DAX calculations, dashboard creation, and visualisation.

Although different tools were used, **all produced consistent results**, confirming the accuracy of the analysis.

Workflow

Excel → Python → SQL → Power BI

- Reviewed and cleaned the data.
- Removed errors and corrected data types.
- Joined all tables using SQL.
- Imported the cleaned dataset into Power BI.
- Built interactive dashboards and generated business insights

Executive Sales Overview

KPI:

Total Revenue: **\$55.76M**

Total Profit: **\$33.09M**

Profit Margin: **59.35%**

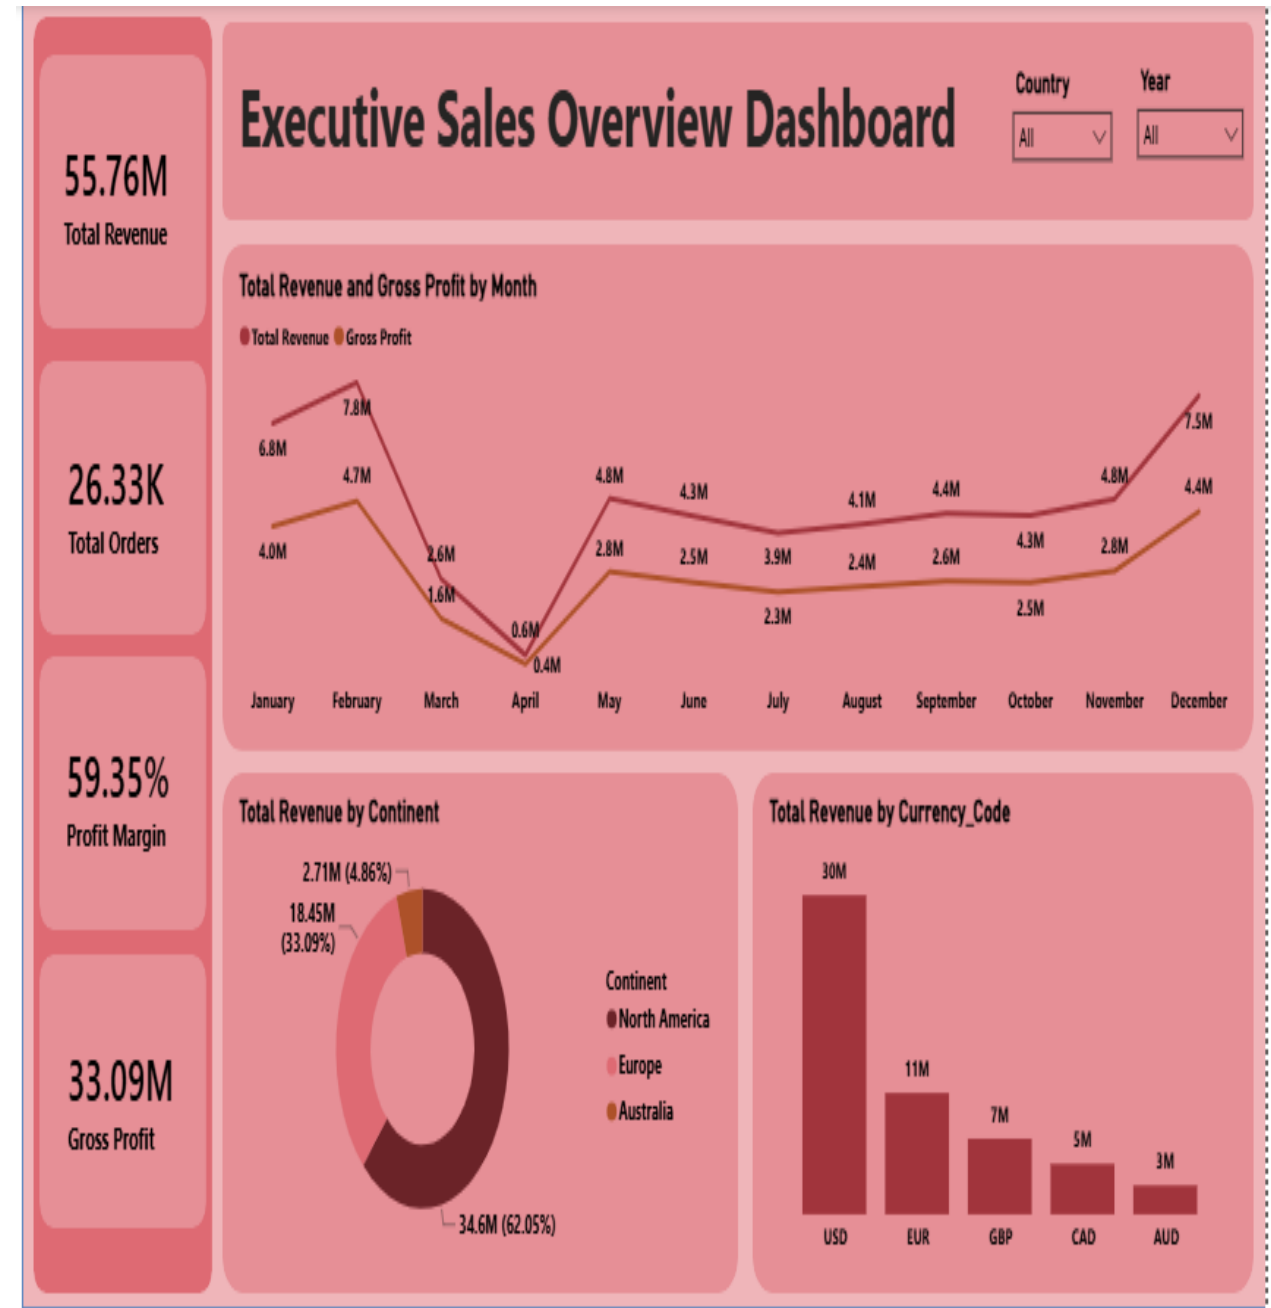

Total Orders: **26.33K**

Key Insights:

- The business generated **\$55.76M** in sales.
- The company earned **\$33.09M** in profit.
- The **59.35% profit margin** shows the business is highly profitable.
- **February** recorded the highest sales (**\$7.8M**).
- **April** recorded the lowest sales (**\$0.6M**).
- **North America** generated the highest revenue.
- Most revenue was received in **USD**.

Business Insight

The company is performing well financially, but sales decrease during some months, creating opportunities for seasonal promotions.

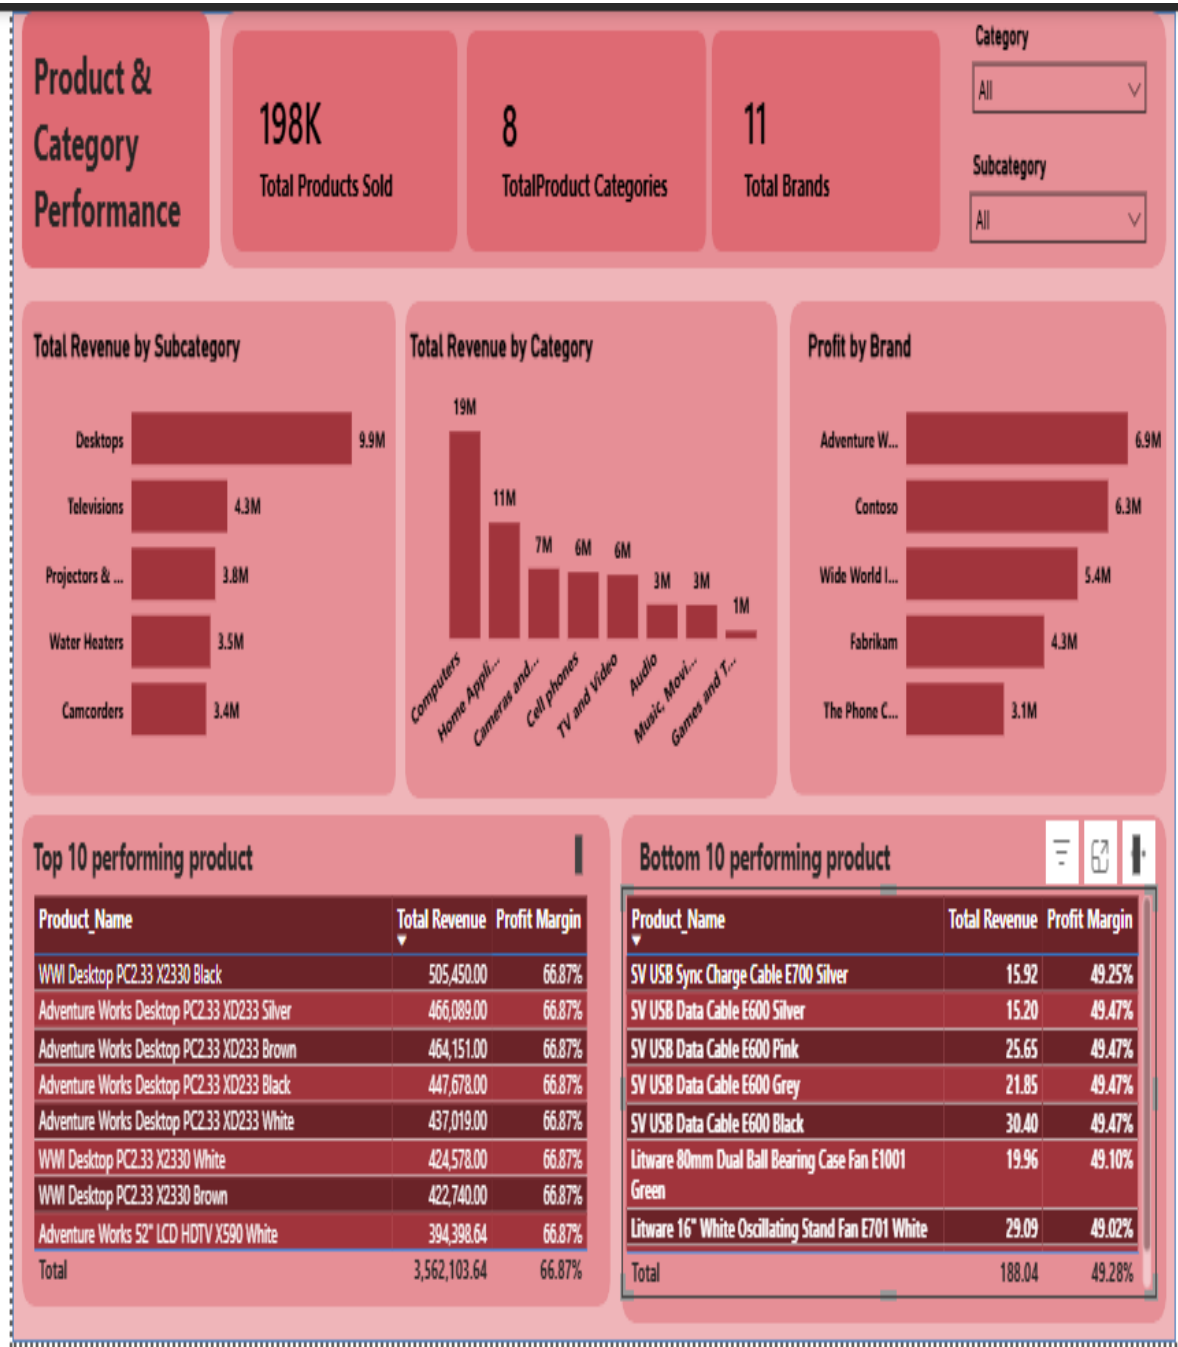

Product & Category Performance

Key Findings

- Computers generated the highest revenue (\$19M).
- Home Appliances ranked second (\$11M).
- Desktops were the best-performing subcategory.
- Adventure Works recorded the highest brand profit.
- WWWI Desktop pc233 x2330 black was the top-performing product.
- SV USB sync charger cable E700 silver recorded one of the lowest profit margins.

Business Insight

Computers are the company's strongest product category and contribute the most to overall revenue and profit.

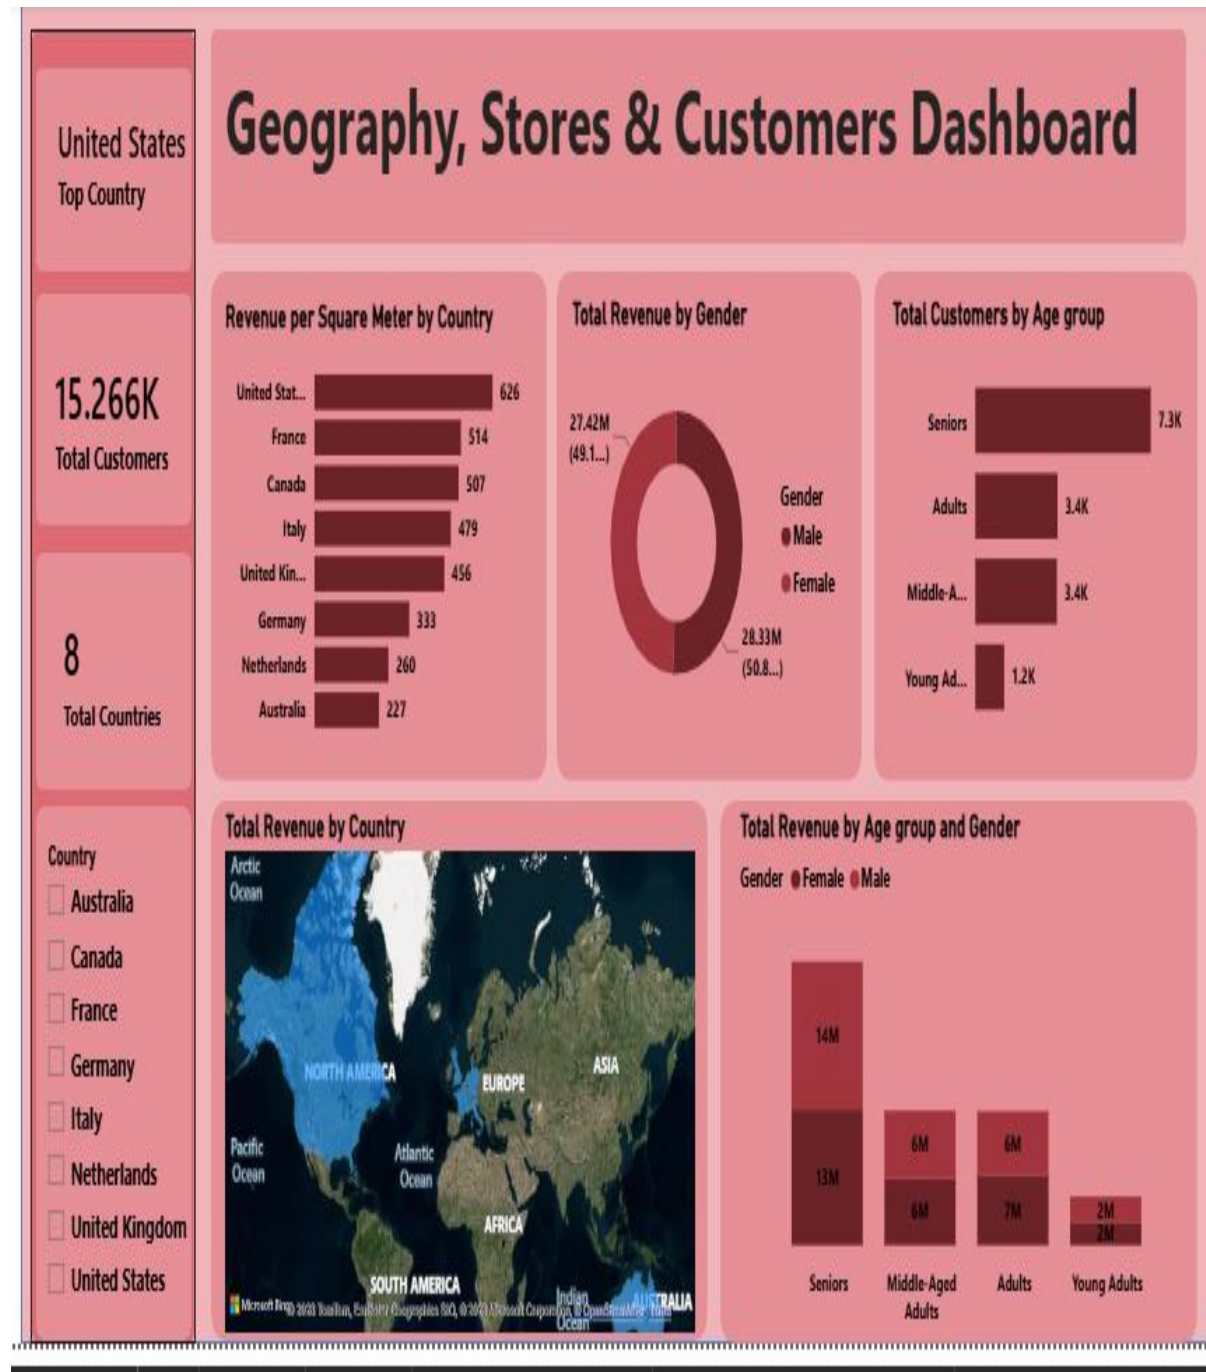

Geography, Stores & Customers

Key Findings

- North America generated the highest revenue.
- The United States had the highest store productivity.
- Australia recorded the lowest store productivity.
- Female and male customers contributed almost equally to revenue.
- Senior customers generated the highest revenue.

Business Insight

North America remains the company's strongest market, while Senior customers are the most valuable customer segment.

Recommendations & Conclusion

Recommendations

- Increase investment in the **Computers** category.
- Introduce promotions during **April** to improve sales.
- Develop loyalty programs for **Senior customers**.
- Improve the performance of **Australian stores**.
- Monitor exchange rates to reduce currency risks.

Conclusion

The company achieved **strong revenue and profitability**.

Computers, North America, and Senior customers are the main drivers of business success.

By improving weaker areas and building on existing strengths, the company can achieve even greater growth.
